

Technology and Science for NASA's Journey to Mars

Andrew S. Keys, Ph.D.
NASA Marshall Space Flight Center
21 March 2016
University of Tennessee at Martin

Presentation Outline

- Introduction
- Brief NASA History
- NASA Today
- Journey to Mars
 - Evolvable Mars Campaign
 - Technologies Required
- NASA Technology Transfer
- How Can YOU to Get Involved

NASA History: Established in 1958

- In response to the Soviet Union's launch of Sputnik 1 on 04 Oct. 1957, the Eisenhower administration signed the National Aeronautics and Space Act of 1958, creating the National Aeronautics and Space Administration (NASA).
- Among other things, the Space Act charges NASA with the responsibility to conduct "activities as may be required for the exploration of space."

E Pluribus Unim NASA

- NASA was established to comprise several existing agencies and commands.
 - **NASA Headquarters** (Washington, DC)
 - Four centers from the National Advisory Committee on Aeronautics (NACA), which had been researching flight technology for more than 40 years prior.
 - **Langley Research Center** (Hampton, VA)
 - **Ames Research Center** (Moffit Field, Mountain View, CA)
 - Lewis Research Center (Renamed **Glenn Research Center**, Cleveland, OH)
 - Dryden High Speed Flight Test (Renamed **Armstrong Flight Research Center**, Mojave, CA)
 - One Department of Defense Agency.
 - Army Ballistic Missile Agency (Renamed to **Marshall Space Flight Center**, Huntsville, AL)
 - One academic institute.
 - **Jet Propulsion Laboratory** (California Institute of Technology, Pasadena, CA)
 - Four Centers established to fulfill functions:
 - **Goddard Space Flight Center** (Greenbelt, MD)
 - Manned Space Center (Renamed **Johnson Space Center**, Houston, TX)
 - **Kennedy Space Center** (Cape Canaveral, FL)
 - **Stennis Space Center** (Southern MS)

As a federal agency, NASA has been considered to operate as a
“loose confederation of semi-autonomous fiefdoms.”

NASA Today: Field Center Locations

NASA History: Support of Aeronautics and Research

- NASA continued the aeronautics research pioneered by NACA as a theme of research.
- It also conducted purely scientific research and worked on developing applications for space technology, combining both pursuits in developing the first weather and communications satellites.

Echo II: 135' balloon satellite launched 25 Jan. 1964

Telstar – First Communication Satellite

Syncom: First Geosynchronous Satellite

Rogallo wing in 7'x10' Tunnel, June 1959.

X-24A lifting body, circa 1969

NASA History: Early Manned Space Missions

"Mercury 7" Announced by NASA on 09 April 1959

- President John F. Kennedy focused NASA and the nation on sending astronauts to the moon by the end of the 1960s.
- Through the Mercury and Gemini projects, NASA developed the technology and skills it needed for the journey.
- On July 20, 1969, Neil Armstrong and Buzz Aldrin became the first of 12 men to walk on the moon, meeting Kennedy's challenge.

NASA History: The Space Shuttle and ISS

- After Apollo, NASA focused on creating a reusable, man-rated launcher to provide regular access to space: the Space Shuttle.
 - First launched in 1981, the space shuttle flew more than 130 successful flights before retiring in 2011.
- In 2000, the United States and Russia established permanent human presence in space aboard the International Space Station (ISS), a multinational project representing the work of 16 nations.
 - The ISS is still a vital part of NASA's Exploration Program with continuing research conducted on living and working in the space environment.

NASA History: Earth and Space Science Heritage

- NASA also has continued research in Earth and Space Sciences.
- Multiple orbital and deep space missions have observed critical information about Earth, the Sun, our Solar System, and the vast expanse of our universe.

NASA Mission Directorates

Aeronautics Research

Mission Directorate

Marshall heavily supports three of four NASA Mission Directorates.

NASA Themes and Priorities

Earth Right Now. *Your planet is changing. We're on it.* #EarthRightNow

NASA's fleet of satellites, its airborne missions and researchers address some of the critical challenges facing our planet today and in the future: climate change, sea level rise, freshwater resources, and extreme weather events.

ISS. *Off the Earth, for the Earth.* #ISS

The International Space Station is a blueprint for global cooperation and scientific advancements, a destination for growing a commercial marketplace in low-Earth orbit, and a test bed for demonstrating new technologies. The space station is the springboard to NASA's next great leap in exploration, including future missions to an asteroid and Mars.

Mars. *Join us on the journey.* #JourneytoMars

We are on a journey to Mars. Today our robotic scientific explorers are blazing the trail. Together, humans and robotics will pioneer the next giant leap in exploration.

Technology. *Technology drives exploration.* #NASATech

We develop, test and fly transformative capabilities and cutting edge exploration technologies. Our technology development provides the onramp for new ideas, maturing them from early stage through flight and giving wings to the innovation economy.

Aeronautics. *NASA is with you when you fly.* #FlyNASA

Every U.S. aircraft and air traffic control tower uses NASA-developed technology. We're committed to transforming aviation by reducing its environmental impact, maintaining safety, and revolutionizing aircraft shapes and propulsion.

Solar System and Beyond. *NASA: We're Out There.* #NASABeyond

NASA's exploration spans the universe. Observing the sun and its effects on Earth. Delving deep into our solar system. Looking beyond to worlds around other stars. Probing the mysterious structures and origins of our universe. Everywhere imaginable, NASA is out there.

Science

Exploration

Exploration

Technology

Aeronautics

Science

NASA's Space Launch System

SLS – America's Human-Rated Heavy-lift Rocket

- Provides initial lift capacity of 70 metric tons (t), evolving to 130t.
- Initially powered by twin five-segment solid rocket boosters and four RS-25 liquid propellant engines, as well as a modified version of an existing upper stage.
- Carries the Orion Multi-Purpose Crew Vehicle (MPCV) and significant science payloads.
- Supports national and international missions beyond Earth's orbit, such as near-Earth asteroids, cis-lunar operations, and eventually Mars.
- Builds on the proven success of Saturn and Shuttle.

Solid Rocket
Booster Test

Friction Stir
Welding for Core
Stage

Shell Buckling
Structural Test

MPCV Stage Adapter
Assembly

Selective Laser
Melting Engine
Parts

RS-25 Core Stage
Engines in Inventory

SLS is essential to the nation's space exploration goals.

Future Evolution Plans for Space Launch System (SLS)

NASA's Orion Multi-Purpose Crew Vehicle

- The Orion Multi-Purpose Crew Vehicle is designed to take humans farther than they've ever gone before.
- Orion will serve as the exploration vehicle that will carry the crew to space, provide emergency abort capability, sustain the crew during the space travel, and provide safe re-entry from deep space return velocities.
- Orion will launch on NASA's new heavy-lift rocket, the Space Launch System.

Commercial Crew Program

Cost-Effective

Developing safe, reliable crew transportation to ISS that reduces reliance on foreign systems.

SPACEX CREW DRAGON & BOEING CST-100 STARLINER

\$58 MILLION
per seat

RUSSIAN SOYUZ

\$81 MILLION
per seat

After certification, the U.S. will have developed two new, independent, human space transportation systems for less than \$5 billion.

Astronauts

Veteran NASA astronauts training to fly the first U.S. Commercial Crew test launches.

Bob Behnken

Eric Boe

Doug Hurley

Suni Williams

- Facilitate the development of U.S. commercial crew space transportation systems to provide safe, reliable, cost-effective access to and from the ISS and low-Earth orbit from America.
- Transport pressurized scientific research and cargo and increase the station crew, enabling twice the amount of scientific research to be conducted.
- By encouraging private companies to provide human transportation services to and from low-Earth orbit, NASA can expand its focus on building spacecraft and rockets for deep space missions on our journey to Mars.

PROVIDERS

Boeing

Spacecraft:
CST-100 Starliner

Launch Vehicle:
ULA Atlas V

Height:
171 Feet

Launch Pad:
Space Launch Complex 41

Destination:
International Space Station

Maximum potential value:
\$4.2B

SpaceX

Spacecraft:
Crew Dragon

Launch Vehicle:
Falcon 9

Height:
208 Feet

Launch Pad:
Launch Complex 39A

Destination:
International Space Station

Maximum potential value:
\$2.6B

Commercial Launch Services

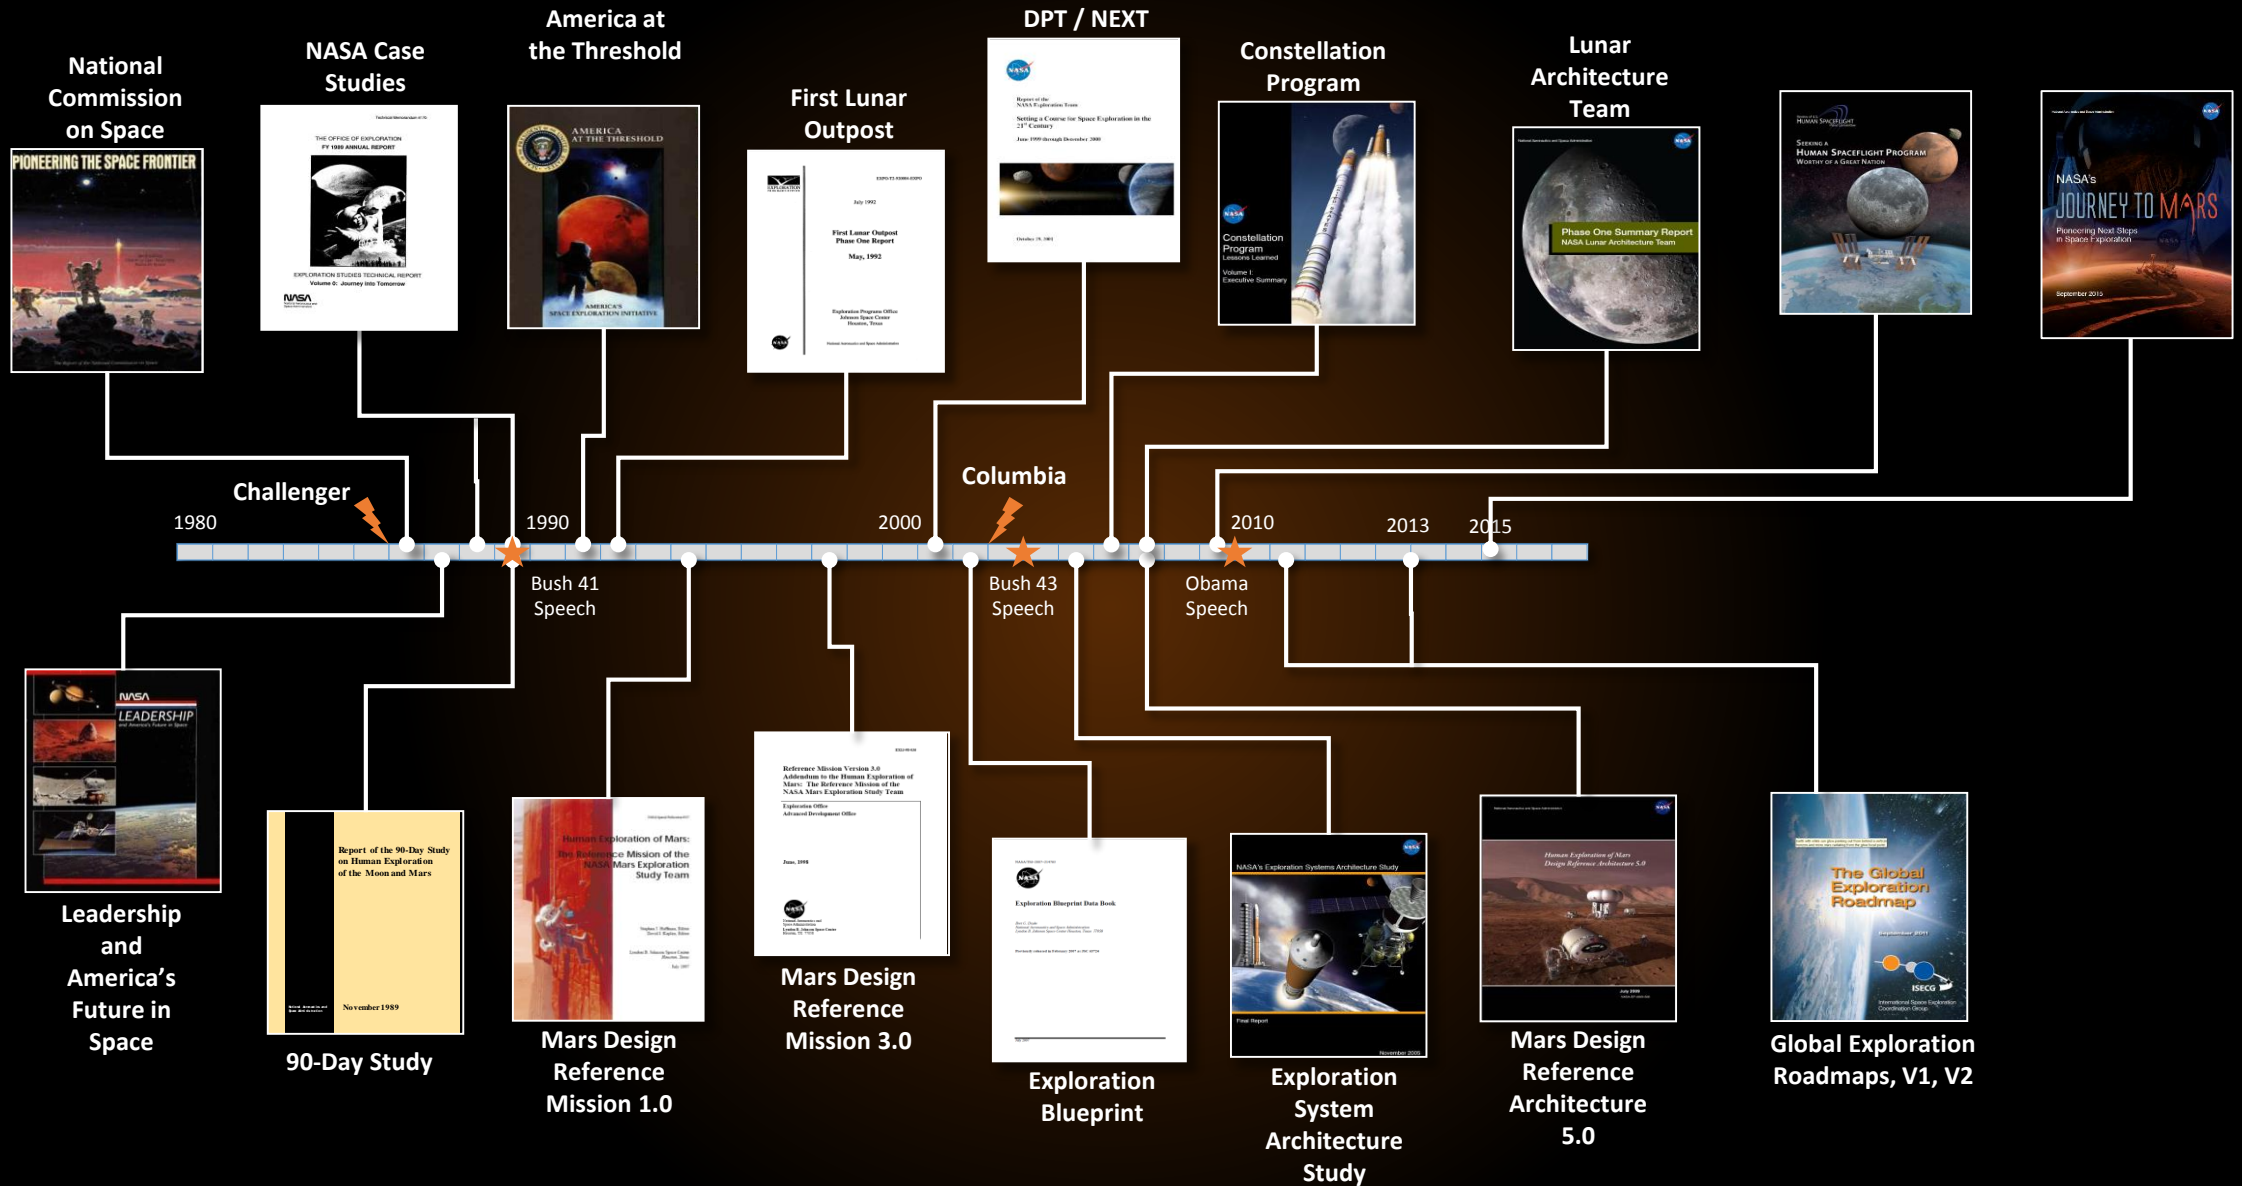

- A little more than two years after the end of the Space Shuttle Program, SpaceX and Orbital ATK began successfully resupplying the space station with cargo launched from the United States.
- The companies developed the rockets and spacecraft through public-private partnerships under the agency's [Commercial Orbital Transportation Services \(COTS\)](#) program
- NASA then awarded Orbital ATK and SpaceX [commercial resupply services contracts](#) to each deliver at least 20 metric tons of cargo to the orbiting laboratory.
- The companies are successfully resupplying the space station, and more missions to deliver scientific investigations and cargo are planned.
- This partnership is changing the way NASA does business,
 - helping build a strong American commercial space industry, and
 - freeing NASA to focus on developing the next-generation rocket and spacecraft that will allow us to travel farther in space than ever before.

JOURNEY TO MARS

Human Exploration Studies Beyond LEO - Toward Mars

Strategic Principles for Sustainable Exploration Campaign

- **Implementable in the near-term** with the buying power of current budgets and in the longer term with budgets commensurate with economic growth;
- **Exploration enables science and science enables exploration**, leveraging robotic expertise for human exploration of the solar system
- Application of **high Technology Readiness Level (TRL) technologies** for near term missions, while focusing sustained investments on technologies and capabilities to address challenges of future missions;
- **Near-term mission opportunities** with a defined cadence of compelling and integrated human and robotic missions providing for an **incremental buildup of capabilities** for more complex missions over time;
- Opportunities for **U.S. commercial business** to further enhance the experience and business base;
- **Multi-use, evolvable space infrastructure**, minimizing unique major developments, with each mission leaving something behind to support subsequent missions; and
- Substantial new **international and commercial partnerships**, leveraging the current International Space Station partnership while building new cooperative ventures.

Plan Outlining Next Steps in the Journey to Mars

Draft versions – 18 months

- Revised by internal & external stakeholders

Overall Flow

- Introduction and Goals
- Our Approach – Pioneering Principles
- Three Phases for J2M
- Our Strategy for the Journey to Mars
 - Cislunar steps
 - Science and human exploration
- Our Progress and Plans
 - Earth-Reliant – ISS, Commercial Crew/Cargo
 - Proving Ground – SLS, Orion, SEP, habitats
 - Earth-Independent – Robotic missions, evolving architectures
- Pioneering Challenges
 - Transportation
 - Working in Space
 - Staying Healthy

#JOURNEYTOMARS

Key Capabilities for the Human Exploration of Mars

- Common Findings from Multiple Studies:

1,100 Days

Total time crew is away from Earth

Maximum surface stay for any given mission

500 Days

12 km/s

Highest Orion Earth entry speed

100 km

Distance for long-range routine exploration

130 t

Heavy-Lift Mass

Multiple

Launches per mission

100-200 kWe

Total continuous transportation power

44 min

Maximum two-way communication time delay

20-30 t

Ability to land large payloads

20 t

Oxygen produced for ascent to orbit

Capabilities and Platforms for Mars Exploration

		ISS	Cis-lunar Short Stay (e.g. ARM)	Cis-lunar Long Stay	Mars Orbit	Mars Surface, Short Stay	Mars Surface, Long Stay
Working in Space and On Mars	In Situ Resource Utilization & Surface Power						X
	Surface Habitat & Mobility					X	X
	Human/Robotic & Autonomous Ops		X	X	X	X	X
	Exploration EVA		X	X	X	X	X
Staying Healthy	Crew Health	X	X	X	X	X	X
	Environmental Control & Life Support	X	X	X	X	X	X
	Radiation Safety		X	X	X	X	X
Transportation	Ascent from Planetary Surfaces					X	X
	Entry, Descent & Landing					X	X
	In-space Power & Prop (incl. SEP, Hybrid)		X	X	X	X	X
	Beyond LEO: SLS (w/ EUS) & Orion		X	X	X	X	X
	To LEO: Commercial Cargo & Crew	X					
	Comm & Navigation	X			X	X	X

MSFC Technology Emphasis Areas

In-Space Propulsion with Emphasis on Cryogenics

In-Space Propulsion (Green Propellants, Electric)

In-Space Propulsion (Nuclear)

In-Space Propulsion (Solar Propulsion Testbeds and Sails, Tethers)

Demonstration Missions

Habitats and Technologies for "Beyond Low Earth Orbit" Exploration

Technologies Supporting Utilization of ISS

Advanced Manufacturing with Emphasis on In-Situ Fabrication and Repair

Human Habitation Elements and Life Support Systems

Technologies for Small payload Launch

X-ray Astrophysics; Scientific Instrument Dev.

Space Environments and Space Weather, Research to Operations

Small Spacecraft and Enabling Technologies

Rapid/Affordable Manufacturing with Emphasis on Propulsion Components

EMC Goal: Define a pioneering strategy and operational capabilities that can extend and sustain human presence in the solar system including a human journey to explore the Mars system starting in the mid-2030s.

- Identify a plan that:
 - **Expands human presence into the solar system** to advance exploration, science, innovation, benefits to humanity, and international collaboration.
 - Provides different **future scenario options** for a range of capability needs to be used as guidelines for near term activities and investments
 - In accordance with key strategic principles
 - Takes advantage of capability advancements
 - Leverages new scientific findings
 - Flexible to policy changes
 - Identifies **linkages to and leverage current investments** in ISS, SLS, Orion, ARM, EAM, technology development investments, science activities
 - Emphasizes **prepositioning and reuse/repurposing of systems** when it makes sense
 - Use location(s) in cis-lunar space for aggregation and refurbishment of systems

EVOLVABLE MARS CAMPAIGN

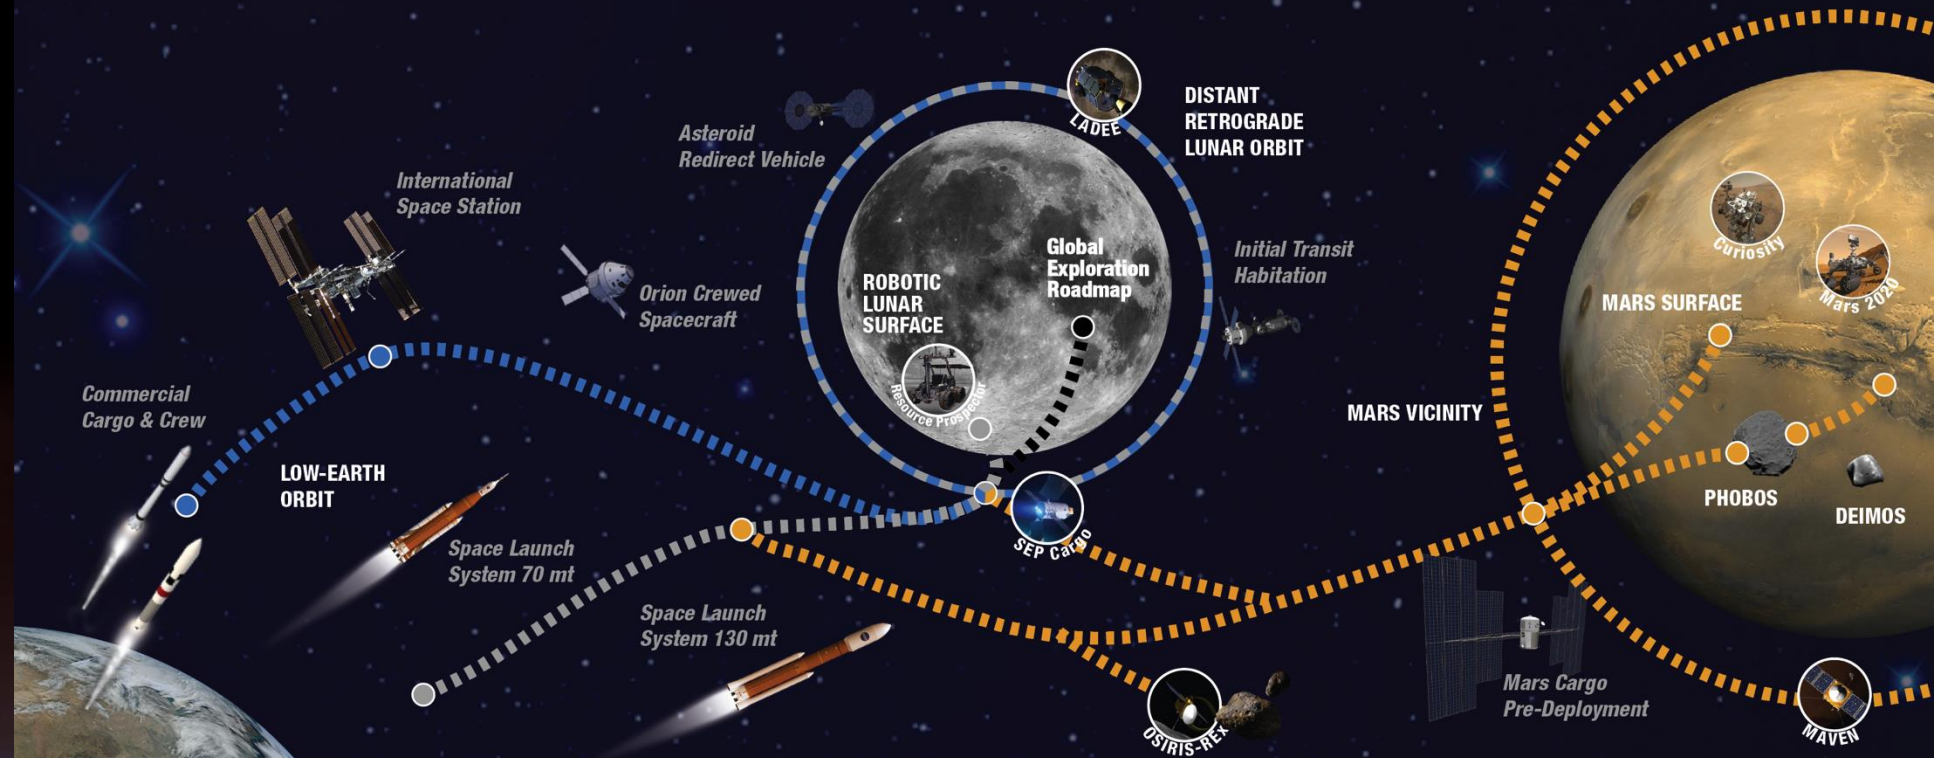

A Pioneering Approach to Exploration

EARTH RELIANT

PROVING GROUND

EARTH INDEPENDENT

THE TRADE SPACE

Across the Board

Solar Electric Propulsion • In-Situ Resource Utilization (ISRU) • Robotic Precursors • Human/Robotic Interactions • Partnership Coordination • Exploration and Science Activities

Cis-lunar Trades

- Deep-space testing and autonomous operations
- Extensibility to Mars
- Mars system staging/refurbishment point and trajectory analyses

Mars Vicinity Trades

- Split versus monolithic habitat
- Cargo pre-deployment
- Mars Phobos/Deimos activities
- Entry descent and landing concepts
- Transportation technologies/trajectory analyses

#JOURNEYTOMARS

Why Cislunar Space?

The 'Gravity Well' Advantage

Gravity Wells Explained

xkcd.com by Randall Munroe

PROVING GROUND OBJECTIVES

Using Cislunar Resources to Enable Human Missions to Mars

TRANSPORTATION

WORKING IN SPACE

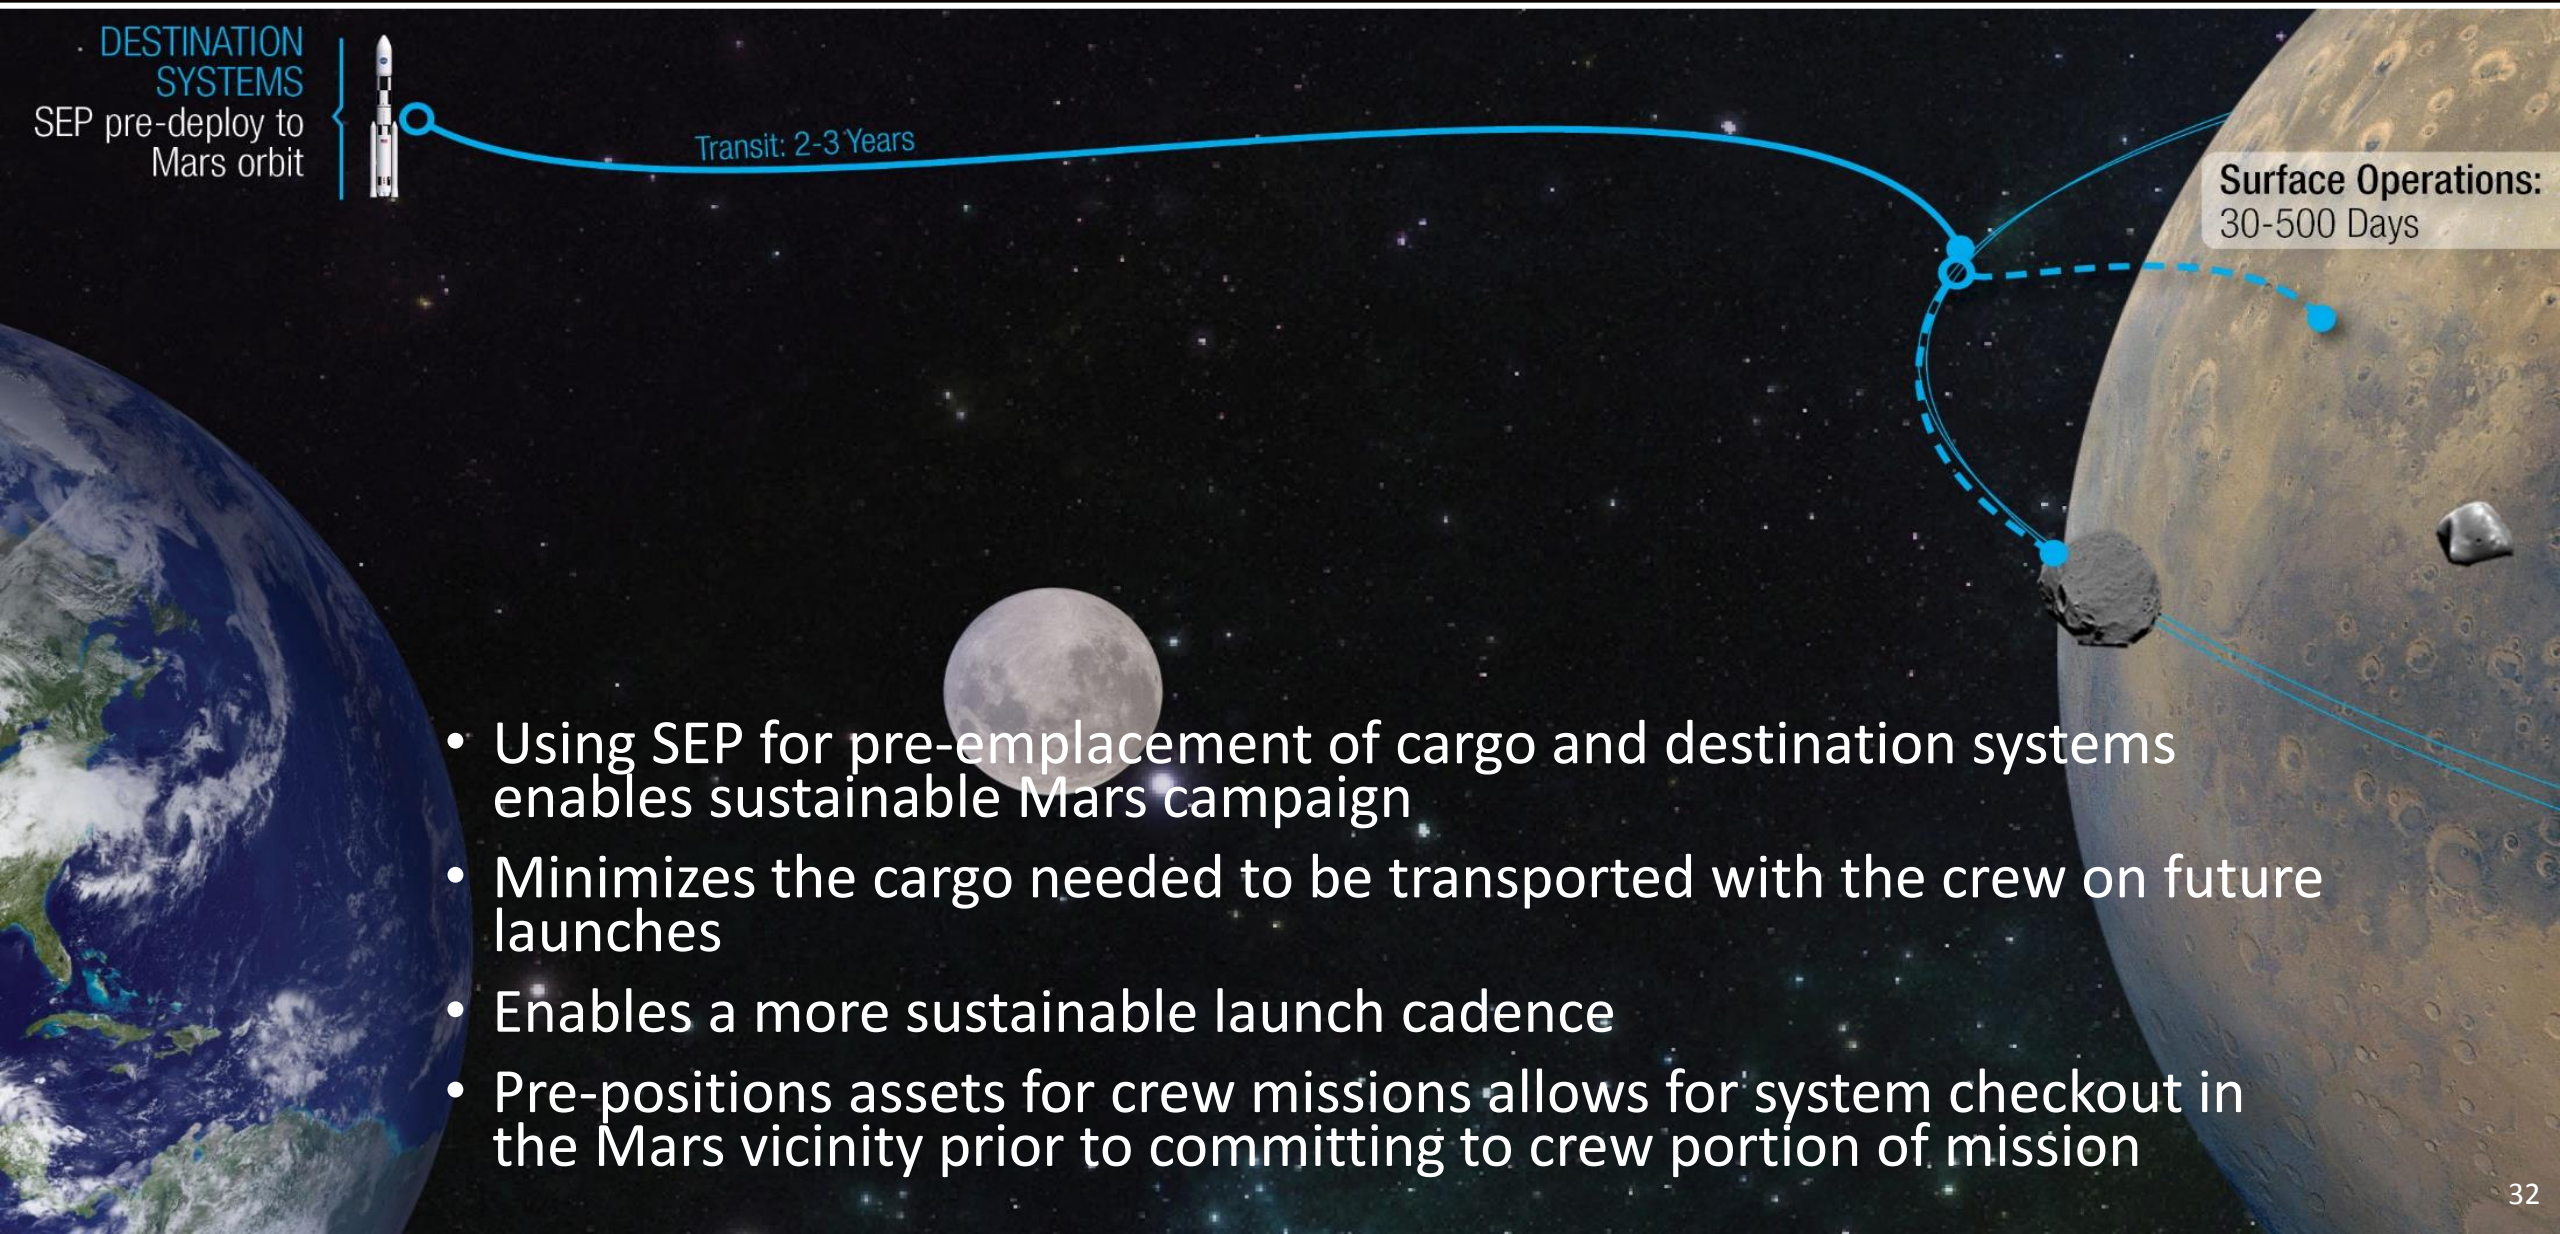

STAYING HEALTHY

- **Heavy Launch Capability**: beyond low-Earth orbit launch capabilities for crew, co-manifested payloads, large cargo
- **Crew**: transport at least four crew to cislunar space
- **In-Space Propulsion**: send crew and cargo on Mars-class mission durations and distances

- **ISRU**: Understand the nature and distribution of volatiles and extraction techniques and decide on their potential use in human exploration architecture.
- **Deep-space operations capabilities**: EVA, Staging, Logistics, Human-robotic integration, Autonomous operations
- **Science**: enable science community objectives

- **Deep-Space Habitation**: beyond low-Earth orbit habitation systems sufficient to support at least four crew on Mars-class mission durations and dormancy
- **Crew Health**: Validate crew health, performance and mitigation protocols for Mars-class missions

Split Mission Concept

- Using SEP for pre-emplacement of cargo and destination systems enables sustainable Mars campaign
- Minimizes the cargo needed to be transported with the crew on future launches
- Enables a more sustainable launch cadence
- Pre-positions assets for crew missions allows for system checkout in the Mars vicinity prior to committing to crew portion of mission

Split Mission Concept

Split Mission Concept

EMC – Major Results to Date

- **Regardless of Mars vicinity destination, common capability developments are required**
- **ISS provides critical Mars mission capability development platform**
- **Lunar DRO is efficient for aggregation and potential refurbishment due to stable environment**
 - Use of gravity assist trajectories enable use of DRO
- **Orion Block 1 is sufficient for Mars architectures with reusable habitats**
- **SLS co-manifested cargo capability increases value of crewed missions and improves cadence**
- **Deep-space habitation serves as initial starting point regardless of destination**
- **ARV derived SEP vehicle can serve as an effective tool for human Mars missions**
 - Reusability can enable follow-on use in cis-lunar space
 - Refuelability under study to enable Mars system follow-on use
 - Current SEP evolvability enables Mars system human missions
- **Mars Phobos /Deimos as initial Mars vicinity mission spread out development costs and meets policy objectives of Mars vicinity in 2030's**
 - Common crew transportation between Mars Phobos / Deimos and Mars Surface staging
 - Phobos provides 35% reduction of radiation exposure compared to other Mars orbit missions
 - Provides ability to address both exploration and science objectives

Mars Technology Video

Technology Needs for Deep Space Exploration

Space Technology Portfolio and Programs

Transformative & Crosscutting Technology Breakthroughs

Technology Demonstration Missions

bridges the gap between early proof-of-concept tests and the final infusion of cost-effective, revolutionary technologies into successful NASA, government and commercial space missions.

Small Spacecraft Technology Program develops and demonstrates new capabilities employing the unique features of small spacecraft for science, exploration and space operations.

Game Changing Development

seeks to identify and rapidly mature innovative/high impact capabilities and technologies that may lead to entirely new approaches for the Agency's broad array of future space missions.

Pioneering Concepts/Developing Innovation Community

NASA Innovative Advanced Concepts (NIAC)

nurtures visionary ideas that could transform future NASA missions with the creation of breakthroughs radically better or entirely new aerospace concepts—while engaging America's innovators and entrepreneurs as partners in the journey.

Space Technology Research Grants

seek to accelerate the development of “push” technologies to support future space science and exploration needs through innovative efforts with high risk/high payoff while developing the next generation of innovators through grants and fellowships.

Center Innovation Fund

stimulates and encourages creativity and innovation within the NASA Centers by addressing the technology needs of the Agency and the Nation. Funds are invested to each NASA Center to support emerging technologies and creative initiatives that leverage Center talent and capabilities.

Creating Markets & Growing Innovation Economy

Centennial Challenges

directly engages nontraditional sources advancing technologies of value to NASA's missions and to the aerospace community. The program offers challenges set up as competitions that award prize money to the individuals or teams that achieve a specified technology challenge.

Flight Opportunities

facilitates the progress of space technologies toward flight readiness status through testing in space-relevant environments. The program fosters development of the commercial reusable suborbital transportation industry.

Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR)

Programs provide an opportunity for small, high technology companies and research institutions to develop key technologies addressing the Agency's needs and developing the Nation's innovation economy.

Enabling Future Exploration Missions

Space Technology focus investments in 8 thrust areas that are key to future NASA missions and enhance national space capabilities.

In- Space Propulsion

Create improvements in thrust levels, specific power, and alternatives to traditional chemical propulsion systems for destination-agnostic, deep space exploration spacecraft systems.

External Application:
Enhanced propulsion capabilities for Commercial and OGA Satellites

High Bandwidth Space Comm

Substantially increase available bandwidth and data rates for near earth and deep space, currently limited by power and frequency allocation limits. Assure robust and reliable interconnected space network.

External Application:
High bandwidth for Commercial and OGA Satellites

Advanced Life Support & Resource Utilization

Human exploration missions beyond low earth orbit will require highly reliable technologies (e.g. reclaiming water reuse of trash, air revitalization) to minimize resupply requirements and increase independence from earth.

External Application:
Mining Industry and other closed environments; OGA

Entry Descent and Landing Systems

Permits more capable science and future human missions to terrestrial bodies. Includes, hypersonic and supersonic aerodynamic decelerators, next- gen TPS materials, retro-propulsion, instrumentation and modeling.

External Application:
Returning commercial assets from space and research from ISS

Space Robotic Systems

Extends our reach by helping us remotely explore planetary bodies, manage in-space assets and support in-space operations by enhancing the efficacy of our operations.

External Application:
Human-safe Robotics for industrial use, disaster response, & overall autonomous operations

Lightweight Space Structures

Targets large decreases in structural mass for launch vehicles and spacecraft materials using nanotech, composites and in space manufacturing capabilities.

External Application:
Industrial Materials and Composites for large structures (rockets, aircraft)

Deep Space Navigation

Allows for more capable science and human exploration missions; enables more precise entry trajectories for inserting into orbits around planets and bodies like Mars, Europa, and Titan.

External Application:
Next Generation GPS and build new industrial base

Space Observatory Systems

Allows for significant gains in science capabilities including: coronagraph technology to characterize exoplanets, advances in surface materials and better control systems for large space optics.

External Application:
Industrial Materials, Earth Observation

Technology Transfer Examples

#SUITINGUP IS CHANGING OUR EVERYDAY LIVES

Technology Drives Exploration

Every system is
100%
pressure tested
and inspected.

Heat-sealing technology
used on spacesuits is used
creating these systems.

Beat the Heat

Thermocule technology
regulates the temperature
between the skin and fabric
by as much as:

3°

Cooling undergarments worn by athletes
help reduce overheating and sweating.

The technology acts like ice cubes
in a drink by absorbing heat
and cooling the material.

Medical

These systems
allow one-person
operation.

Pharmaceutical containment
systems enable safe processing
of active pharmaceutical
ingredients.

UV Protection

Using NASA spacesuit technology,
UV-blocking apparel was developed to
protect those with severe sun sensitivities.

98%

of UV rays
are blocked in
the apparel

Charcoal, coconut and
titanium are used in the
fabrics to reflect UV rays.

Masks will
operate for
4
hours

1.5M

U.S. soldiers
are equipped
with gas masks

30+

spacesuit spinoffs

Human Safety

Masks can be on
and working in

30
seconds

Gas masks and protective
suits provide state-of-the-art
protection from chemical,
biological and nuclear inhalants.

Extreme Exposure

Specialized chemical
handlers wear suits that
utilize air produced from:
-350°F
cryogenic liquid
air backpacks

Firefighters use lightweight breathing
systems and wear suits made out of
heat-protective and fire-resistant materials.

This technology was
developed during Apollo and
the Space Shuttle Program
for the Supercritical Air
Mobility Pack.

NASA Today: Federal and NASA Budget

FY16 US Federal Budget

(estimated outlay) = **\$3.919T**

NASA's FY16 Appropriated Budget = **\$19.3B**

Federal Discretionary spending = **\$1.15T**

In FY15, NASA's budget is 0.48% of the full federal budget outlay.

From 1958 through 2015 inclusive, NASA's cumulative budget is

0.75%

of cumulative US Federal Budget Spending.

Space Technology Research Grants Program

*Engage Academia: tap into **spectrum** of academic researchers, from graduate students to senior faculty members, to examine the theoretical feasibility of ideas and approaches that are critical to making science, space travel, and exploration more effective, affordable, and sustainable.*

- **NASA Space Technology Research Fellowships**

- Graduate student research in space technology; research conducted on campuses and at NASA Centers and not-for-profit R&D labs

- **Early Career Faculty**

- Focused on supporting outstanding faculty researchers early in their careers as they conduct space technology research of high priority to NASA's Mission Directorates

- **Early Stage Innovations**

- University-led, possibly multiple investigator, efforts on early-stage space technology research of high priority to NASA's Mission Directorates
- Paid teaming with other universities, industry and non-profits permitted

NASA SPACE TECHNOLOGY

National Aeronautics and
Space Administration

RESEARCH FELLOWSHIPS 2016

CALL FOR FELLOWSHIP APPLICATIONS

Learn, collaborate, discover, achieve...

The NASA Space Technology Mission Directorate seeks to sponsor graduate student researchers pursuing or planning to pursue master's and doctoral degrees in relevant space technology disciplines who show significant potential to contribute to the strategic goals and missions of NASA in the area of **space technology**.

The fellowship, up to \$74,000 per year, will coincide with the start of the fall 2016 term. In addition to providing a \$36,000 annual stipend, the fellowship provides support for tuition, health insurance and the faculty advisor. The fellowship also provides support for onsite tenure at NASA Centers across the country.

To date, NASA has awarded these prestigious fellowships to 301 students from 83 universities across 36 states and one U.S. territory. Fellowship recipients will collaborate with leading experts in space technology to provide a more robust national capability for aerospace activities and contribute to the Nation's innovation economy.

The solicitation opened on *September 10, 2015*

Student applications will be due by 6:00 p.m. ET on **November 05, 2015**

Applications will be accepted via NSPIRES after September 10, 2015:

<http://tinyurl.com/NSTRF2016>

U.S. citizens and permanent residents only.
PS-00885-1012

NASA Space Technology Research Fellowships

Eligibility Requirements for NSTRF16

1. Pursuing or seeking to pursue advanced degrees directly related to space technology.
2. Are U.S. citizens or permanent residents of the U.S.
3. Are or will be enrolled in a full-time master's or doctoral degree program at an accredited U.S. university in fall 2015.
4. Are early in their graduate careers.

Eligibility Summary:

Both ECF and ESI proposals must be submitted by accredited U.S. universities

Early Career Faculty

- PI must be recent Ph.D. (last 7 years)
- Untenured assistant professor and on tenure track
- U.S. citizen or permanent resident
- No co-investigators

Early Stage Innovations

- PI must be from proposing university
- Co-investigators are permitted
- $\geq 50\%$ of the proposed budget must go to the proposing university
- $\geq 70\%$ of the proposed budget must go to universities

NASA Research Opportunities

Supporting research in science and technology is an important part of NASA's overall mission. NASA solicits this research through the release of various research announcements in a wide range of science and technology disciplines. NASA uses a peer review process to evaluate and select research proposals submitted in response to these research announcements. Researchers can help NASA achieve national research objectives by submitting research proposals and conducting awarded research. This site facilitates the search for NASA research opportunities.

NASA Research
